Communication strategies: For those communicating with a person with a hearing impairment

How to help a hearing impaired person understand you

When someone speaks, clues are received from what is heard and seen. These clues complement each other, helping the hearing-impaired person to piece together the conversation.

For the hearing impaired the visual clues of speech become very important. Simple actions on your part may influence how easily these visual clues can be followed. The following points will help:

- Attract the observer's attention before you start talking to them so that they can catch the beginning of what is said and not just the ending
- Avoid speaking from another room, or with your head in a cupboard
- Keep your face visible and ensure your environment is well lit
- Try to avoid conversation in the kitchen where there are background noises from food mixers, washing machines and dishwashers etc
- Do not hide your lip movements behind your hands, paper etc
- Do not speak while looking down into a newspaper, book etc

Patient Information

- Keep your head still when speaking
- Use natural hand gestures but do not exaggerate
- Do not shout. Speak clearly and not too fast, shouting and over mouthing will alter the lip pattern and speaking too slowly may destroy the rhythm of speech
- Try to make the subject of conversation as clear as possible
- Try to use full sentences rather than just short phrases as they are easier to understand
- When you are speaking do not distract the observer's attention with unnecessary hand movements
- For a hearing impaired person, it is important to see the speaker's eyes to gauge how they are feeling. Therefore, if you are wearing sunglasses remove these while speaking
- Repeat the sentence again if necessary and then perhaps rephrase what you want to say. Some words are more difficult to lip-read than others, for example, the month of March is easier to lip-read than August. In the word March the shapes making the 'M' and 'CH' are visible on the lips, but the components in August are made inside the mouth so there is nothing to see
- Write down any important facts
- Most importantly, **be patient**
- Remember a hearing aid amplifies background noise as well as speech
