

Children's Outpatients Department

Allergy - Egg Challenge

The challenge will take place in the Medical Day Unit on Ward 16 at University hospital, Coventry.

Food challenges involve testing whether a child is still sensitive to a food in a safe, controlled way. This is done by giving them increased amounts of a food, starting with very small amounts

Observations

For the first 60 minutes of the challenge a staff nurse (with a paediatric life support certificate) will be present. The nurse will be looking for signs of adverse reaction, which are:

- Rash around the mouth
- Urticarial rash (itchy rash)
- Sneezing
- Vomiting
- Irritability
- Pallor (pale skin)
- Wheezing or coughing
- Loose stool
- Stridor (croup-like breathing)
- Collapse

After the first 60 minutes your child will be checked half hourly providing a parent is present. Regular nursing observations of pulse, respiratory rate and oxygen saturations should be recorded half hourly as well as looking for all of the above.

Patient Information

Stopping the challenge

If any of the above signs appear, no further egg will be given and in the event of a rash, wheeze, stridor or a more serious reaction, a doctor will be contacted and the appropriate medication will be given.

Egg administration

- ½ tsp of hard boiled egg yolk will be given and your child will be observed for 15 minutes
- If no reaction, 1tsp of hard-boiled egg yolk will be given and your child will be observed for 15 minutes
- If no reaction, ½ tsp hard boiled egg white will be given and your child will be observed for 15 minutes.
- If no reaction, 1tsp hard boiled egg white will be given and your child will be observed for 15 minutes.
- If no reaction, egg will then be given freely. Your child will need to have at least ½ boiled egg in total.

If a boiled egg is disliked we could challenge with scrambled egg, starting with ¼ teaspoon and gradually increasing the amount given until the whole egg has been eaten.

Your child will be observed for a period of time following completion of the challenge. The time will vary depending on whether your child has had a reaction. You will need to stay for at least 2 hours following completion.

We aim to give you a mutually convenient date for your child's egg challenge at this outpatient appointment.

Patient Information

On the day of the challenge it would be helpful if you could bring:

- Any well loved food, which your child does not react to, that we could use to disguise the egg with, if necessary. For example, tomato ketchup, egg free salad cream, pickle or flavoured yogurt.
- A packed lunch
- A favourite book or toy
- An egg (that we could use for scrambling)

Medications to be stopped before the test

If your child is on certain medications, it may interfere with the challenge and therefore needs to be stopped for a few days. Please see below:

- Short acting antihistamines such as: Piriton, Phenergan and Vallergran **should be stopped two days before the test.**
- Long acting antihistamines such as Cetirizine and Loratidine **should be stopped five days before the test.**
- Your child can continue on all asthma inhalers

Please speak to **Louise Bashford, Kate Weller** or **Sarah Pitts** (Allergy Nurses) if your child is on **any other medication**, if you have any concerns or need clarification about the test and stopping the medication. Obviously if the medication cannot be stopped or must be given (as in the case of an allergic reaction) please speak to the allergy nurse to rearrange the challenge.

If your child has a cough, cold or high temperature then please let us know before you arrive as we may have to cancel the challenge.

Patient Information

Further Information

If you require further information, you can contact the Secretary for Dr Costa and Dr Macdougall 01788 663189. Alternatively you can contact the Allergy Nurses, Louise, Kate or Sarah, via email: childrensallergy@uhcw.nhs.uk
